

Product Overview

WHAT IS KPI GENERATOR™?

KPI Generator™ is a web-based software application designed to automate the development and generation of graphical representations of key performance indicators.

PROGRAM FLEXIBILITY

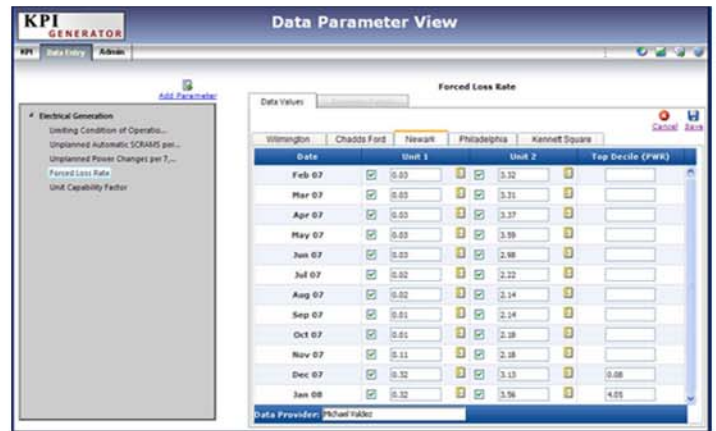

This software is intended to support an entire enterprise of nuclear power plants where indicators can be tailored to the needs of a specific site or be applied across the enterprise.

Features / Benefits

- Centralized, Automatic Data Collection
- Easy Indicator Creation
- Customizable Two-Level Hierarchy for Indicator Organization
- Custom Criteria Bands for Each Data Series
- Optimized for Integration
- Multiple Facility Support
- User Defined Indicators
- Customizable Application Security
- Web Based
- Minimal Training

DATA COLLECTION

KPI Generator™ can be set-up to automatically retrieve data from any data source including work management systems and other IKS applications. Once a data point is in KPI Generator™, the user can manually modify the data if needed, exclude data points, and associate action plans and analysis with individual data points. KPI Generator™ also allows manual creation of data series through an easy to use table interface.

INDICATOR CREATION WIZARD

An indicator can be created in three simple steps:

- Set the general chart options.
- Set the data series options.
- Set the chart format options.

Once an indicator has been created, it can be viewed in the interactive web interface or exported to different formats (e.g. PDF or PowerPoint).
