

## WHAT IS PAM MANAGER™?

It is a web-based software tool that automates the ProActive Maintenance Process of Equipment Reliability. ProActive Maintenance is designed to facilitate continuous improvement of the established maintenance basis. The PAM Module consists of two modules: JIT Work Order Review (e.g. T-26) and Craft Feedback Review of As Found Condition Codes (AFCC). The data integration required to support basis decision-making is completely automated. The PAM Module can be used in Fossil and Nuclear applications and has proven to support the Continuing Equipment Reliability Industry Standards.

## Features/Benefits

- JIT Work Order Review
- Craft Feedback Review
- Web-based
- Powerful Data Integration
- Minimal Training
- Performance Indicator Reports
- Fleet Solution
- JIT/CF Personal Filters

## JIT WORK ORDER REVIEW

This module is designed to facilitate the review of work orders just before they are scheduled to be worked. The exact lead time for review can be customized to your business process. This module is tightly linked to the CMMS and data integration to other sources is completely automated. Once a required action has been identified, workflow to the required persons or processes is facilitated.

## CRAFT FEEDBACK REVIEW

The Craft Feedback Review module facilitates the review of craft feedback captured in completed work orders. The key inputs into refining the maintenance basis are As Found Condition Codes (AFCC) and closing remarks. Work orders are integrated directly from the CMMS. All data integration required for decision-making is automated. Workflow is facilitated when the required action has been identified.
